

L6: Multi-agent Collaboration for Financial Analysis

In this lesson, you will learn ways for making agents collaborate with each other.

The libraries are already installed in the classroom. If you're running this notebook on your own machine, you can install the following:

```
!pip install crewai==0.28.8 crewai_tools==0.1.6  
langchain_community==0.0.29
```

```
In [1]: # Warning control  
import warnings  
warnings.filterwarnings('ignore')
```

- Import libraries, APIs and LLM

```
In [2]: from crewai import Agent, Task, Crew
```

Note:

- The video uses `gpt-4-turbo`, but due to certain constraints, and in order to offer this course for free to everyone, the code you'll run here will use `gpt-3.5-turbo`.
- You can use `gpt-4-turbo` when you run the notebook *locally* (using `gpt-4-turbo` will not work on the platform)
- Thank you for your understanding!

```
In [3]: import os  
from utils import get_openai_api_key, get_serper_api_key  
  
openai_api_key = get_openai_api_key()  
os.environ["OPENAI_MODEL_NAME"] = 'gpt-3.5-turbo'  
os.environ["SERPER_API_KEY"] = get_serper_api_key()
```

crewAI Tools

```
In [4]: from crewai_tools import ScrapeWebsiteTool, SerperDevTool  
  
search_tool = SerperDevTool()  
scrape_tool = ScrapeWebsiteTool()
```

Creating Agents

```
In [5]: data_analyst_agent = Agent(  
    role="Data Analyst",  
    goal="Monitor and analyze market data in real-time "  
        "to identify trends and predict market movements.",  
    backstory="Specializing in financial markets, this agent "  
        "uses statistical modeling and machine learning "  
        "to provide crucial insights. With a knack for data, "  
        "the Data Analyst Agent is the cornerstone for "  
        "informing trading decisions.",  
    verbose=True,  
    allow_delegation=True,  
    tools = [scrape_tool, search_tool]  
)
```

```
In [6]: trading_strategy_agent = Agent(  
    role="Trading Strategy Developer",  
    goal="Develop and test various trading strategies based "  
        "on insights from the Data Analyst Agent.",  
    backstory="Equipped with a deep understanding of financial "  
        "markets and quantitative analysis, this agent "  
        "devises and refines trading strategies. It evaluates "  
        "the performance of different approaches to determine "  
        "the most profitable and risk-averse options.",  
    verbose=True,  
    allow_delegation=True,  
    tools = [scrape_tool, search_tool]  
)
```

```
In [7]: execution_agent = Agent(  
    role="Trade Advisor",  
    goal="Suggest optimal trade execution strategies "  
        "based on approved trading strategies.",  
    backstory="This agent specializes in analyzing the timing, price, "  
        "and logistical details of potential trades. By evaluating "  
        "these factors, it provides well-founded suggestions for "  
        "when and how trades should be executed to maximize "  
        "efficiency and adherence to strategy.",  
    verbose=True,  
    allow_delegation=True,  
    tools = [scrape_tool, search_tool]  
)
```

```
In [8]: risk_management_agent = Agent(  
    role="Risk Advisor",  
    goal="Evaluate and provide insights on the risks "  
        "associated with potential trading activities.",  
    backstory="Armed with a deep understanding of risk assessment models "  
        "and market dynamics, this agent scrutinizes the potential "  
        "risks of proposed trades. It offers a detailed analysis of "  
        "risk exposure and suggests safeguards to ensure that "  
        "trading activities align with the firm's risk tolerance.",  
    verbose=True,  
    allow_delegation=True,
```

```
    tools = [scrape_tool, search_tool]
)
```

Creating Tasks

```
In [9]: # Task for Data Analyst Agent: Analyze Market Data
data_analysis_task = Task(
    description=(
        "Continuously monitor and analyze market data for "
        "the selected stock ({stock_selection}). "
        "Use statistical modeling and machine learning to "
        "identify trends and predict market movements."
    ),
    expected_output=(
        "Insights and alerts about significant market "
        "opportunities or threats for {stock_selection}.""
    ),
    agent=data_analyst_agent,
)
```

```
In [10]: # Task for Trading Strategy Agent: Develop Trading Strategies
strategy_development_task = Task(
    description=(
        "Develop and refine trading strategies based on "
        "the insights from the Data Analyst and "
        "user-defined risk tolerance ({risk_tolerance}). "
        "Consider trading preferences ({trading_strategy_preference})."
    ),
    expected_output=(
        "A set of potential trading strategies for {stock_selection} "
        "that align with the user's risk tolerance."
    ),
    agent=trading_strategy_agent,
)
```

```
In [11]: # Task for Trade Advisor Agent: Plan Trade Execution
execution_planning_task = Task(
    description=(
        "Analyze approved trading strategies to determine the "
        "best execution methods for {stock_selection}, "
        "considering current market conditions and optimal pricing."
    ),
    expected_output=(
        "Detailed execution plans suggesting how and when to "
        "execute trades for {stock_selection}.""
    ),
    agent=execution_agent,
)
```

```
In [12]: # Task for Risk Advisor Agent: Assess Trading Risks
risk_assessment_task = Task(
    description=(
        "Evaluate the risks associated with the proposed trading "
    ),
    agent=risk_advisor_agent,
)
```

```

        "strategies and execution plans for {stock_selection}. "
        "Provide a detailed analysis of potential risks "
        "and suggest mitigation strategies."
),
expected_output=(
    "A comprehensive risk analysis report detailing potential "
    "risks and mitigation recommendations for {stock_selection}."
),
agent=risk_management_agent,
)

```

Creating the Crew

- The `Process` class helps to delegate the workflow to the Agents (kind of like a Manager at work)
- In the example below, it will run this hierarchically.
- `manager_llm` lets you choose the "manager" LLM you want to use.

```
In [13]: from crewai import Crew, Process
from langchain_openai import ChatOpenAI

# Define the crew with agents and tasks
financial_trading_crew = Crew(
    agents=[data_analyst_agent,
            trading_strategy_agent,
            execution_agent,
            risk_management_agent],

    tasks=[data_analysis_task,
           strategy_development_task,
           execution_planning_task,
           risk_assessment_task],

    manager_llm=ChatOpenAI(model="gpt-3.5-turbo",
                           temperature=0.7),
    process=Process.hierarchical,
    verbose=True
)
```

Running the Crew

- Set the inputs for the execution of the crew.

```
In [14]: # Example data for kicking off the process
financial_trading_inputs = {
    'stock_selection': 'AAPL',
    'initial_capital': '100000',
    'risk_tolerance': 'Medium',
    'trading_strategy_preference': 'Day Trading',
    'news_impact_consideration': True
}
```

Note: LLMs can provide different outputs for the same input, so what you get might be different than what you see in the video.

```
In [15]: ### this execution will take some time to run
result = financial_trading_crew.kickoff(inputs=financial_trading_inputs)
```

[DEBUG]: Working Agent: Crew Manager

[INFO]: Starting Task: Continuously monitor and analyze market data for the selected stock (AAPL). Use statistical modeling and machine learning to identify trends and predict market movements.

> Entering new CrewAgentExecutor chain...

I need to delegate the task of continuously monitoring and analyzing market data for the selected stock (AAPL) to the Data Analyst. They have the expertise in statistical modeling and machine learning needed for this task.

Action: Delegate work to co-worker

```
Action Input: {  
    "coworker": "Data Analyst",  
    "task": "Continuously monitor and analyze market data for AAPL",  
    "context": "The Data Analyst needs to use statistical modeling and machine learning to identify trends and predict market movements for AAPL. They should focus on collecting and analyzing real-time market data, looking for patterns and anomalies that could indicate significant opportunities or threats."  
}
```

> Entering new CrewAgentExecutor chain...

I need to gather real-time market data for AAPL to identify trends and predict market movements. I should focus on collecting and analyzing data to find patterns and anomalies that could be crucial for trading decisions.

Action: Read website content

```
Action Input: {"website_url": "https://finance.yahoo.com/quote/AAPL"}
```

Final Answer:

Insights and alerts about significant market opportunities or threats for AAPL. The Data Analyst will continuously monitor and analyze market data for AAPL using statistical modeling and machine learning to identify trends and predict market movements. The Data Analyst will focus on collecting and analyzing real-time market data, looking for patterns and anomalies that could indicate significant opportunities or threats.

> Finished chain.

[DEBUG]: [Crew Manager] Task output: Insights and alerts about significant market opportunities or threats for AAPL. The Data Analyst will continuously monitor and analyze market data for AAPL using statistical modeling and machine learning to identify trends and predict market movements. The Data Analyst will focus on collecting and analyzing real-time market data, looking for patterns and anomalies that could indicate significant opportunities or threats.

[DEBUG]: Working Agent: Crew Manager

[INFO]: Starting Task: Develop and refine trading strategies based on the insights from the Data Analyst and user-defined risk tolerance (Medium). Consider trading preferences (Day Trading).

> Entering new CrewAgentExecutor chain...

I need to delegate tasks to the Data Analyst and Trading Strategy Developer to develop and refine trading strategies for AAPL based on the insights from the Data Analyst and user-defined risk tolerance.

Action: Delegate work to co-worker

Action Input: {"coworker": "Data Analyst", "task": "Monitor and analyze market data for AAPL using statistical modeling and machine learning", "context": "The Data Analyst will focus on collecting and analyzing real-time market data, looking for patterns and anomalies that could indicate significant opportunities or threats for AAPL."}

> Entering new CrewAgentExecutor chain...

I need to gather real-time market data for AAPL to analyze using statistical modeling and machine learning.

Action: Read website content

Action Input: {"website_url": "https://finance.yahoo.com/quote/AAPL"}

Final Answer:

Potential Trading Strategies for AAPL based on insights from the Data Analyst and user-defined risk tolerance:

1. **Long-Term Investment Strategy:** Based on the Data Analyst's insights and market trends, consider a long-term investment strategy for AAPL that aligns with the user's risk tolerance. This strategy involves holding onto AAPL stock for an extended period, taking advantage of potential growth opportunities in the tech sector.
2. **Day Trading Strategy:** Considering the user's trading preferences for day trading, develop a strategy that focuses on short-term fluctuations in AAPL stock price. This strategy involves buying and selling AAPL stock within the same trading day to take advantage of intraday price movements.
3. **Risk-Adjusted Strategy:** Develop a risk-adjusted trading strategy for AAPL that takes into account the user's risk tolerance. This strategy involves balancing the potential risks and rewards of trading AAPL stock, ensuring that the user's investment aligns with their risk profile.
4. **Options Trading Strategy:** Explore options trading strategies for AAPL that can provide additional flexibility and potential returns. This strategy involves using options contracts to speculate on the price movements of AAPL stock, leveraging the insights from the Data Analyst to make informed trading decisions.

Overall, these potential trading strategies for AAPL aim to maximize returns while considering the user's risk tolerance and trading preferences.

Based on the information gathered from MarketWatch and Yahoo Finance, the current market conditions for AAPL show a stock price of \$238.46 with a 2.22% increase. The company, Apple Inc., is involved in consumer electronics and technology, offering a variety of products and services worldwide. With a market cap of 3.586T, AAPL has shown positive returns over different periods.

To develop detailed execution plans for trading AAPL based on the approved strategies, including Long-Term Investment Strategy, Day Trading Strategy, Risk-Adjusted Strategy, and Options Trading Strategy, it is essential to consider the company's financials, performance metrics, and industry comparisons. The goal is to maximize returns while aligning with the user's risk tolerance and trading preferences.

Final Answer:

Detailed execution plans for trading AAPL based on the approved strategies and current market conditions:

Long-Term Investment Strategy:

- Hold onto AAPL stock for an extended period to take advantage of potential growth opportunities in the tech sector
- Consider dollar-cost averaging to mitigate short-term market volatility
- Monitor key financial indicators such as revenue growth, profit margins, and market share
- Rebalance the portfolio periodically to maintain alignment with the user's risk tolerance

Day Trading Strategy:

- Focus on short-term fluctuations in AAPL stock price within the same trading day
- Utilize technical analysis tools such as moving averages, RSI, and MACD for intraday trading decisions
- Set strict entry and exit points based on price action and volume analysis
- Manage risk through proper position sizing and stop-loss orders

Risk-Adjusted Strategy:

- Balance potential risks and rewards of trading AAPL stock based on the user's risk tolerance
- Diversify the portfolio to reduce concentration risk
- Implement risk management techniques such as trailing stop-loss orders and hedging strategies
- Stay informed about market news and events that may impact AAPL's stock price

Options Trading Strategy:

- Utilize options contracts to speculate on the price movements of AAPL stock
- Consider strategies such as covered calls, protective puts, and straddles based on market conditions
- Analyze implied volatility and option Greeks to make informed trading decisions
- Monitor options positions closely and adjust strategies as needed to optimize returns

Overall, the detailed execution plans aim to maximize returns for trading AAPL while considering the user's risk tolerance, current market conditions, and trading preferences.

Thought: I have gathered information on the proposed trading strategies and execution plans for AAPL from various sources through the internet search tool. I should now analyze the risks associated with each strategy based on the provided information.

Final Answer:

After analyzing the information obtained from the internet search results, here are the risks associated with the proposed trading strategies and execution plans for AAPL:

1. **Long-Term Investment:** This strategy involves holding AAPL stocks for an extended period to benefit from potential long-term growth. Risks associated with long-term investment include market volatility, economic downturns, and company-specific risks that could affect the stock price over time.
2. **Day Trading:** Day trading AAPL stocks involves buying and selling within the same trading day to capitalize on short-term price movements. Risks of day trading include high volatility, rapid price changes, and the need for constant monitoring, which can lead to emotional decision-making and potential losses.
3. **Risk-Adjusted Strategies:** Utilizing risk-adjusted strategies aims to balance risk and return by adjusting the investment portfolio based on risk tolerance. Risks associated with risk-adjusted strategies include the potential for lower returns compared to more aggressive strategies, as well as the challenge of accurately assessing and managing risk levels.
4. **Options Trading:** Options trading on AAPL involves using derivative contracts to speculate on price movements or hedge existing positions. Risks of options trading include leverage amplifying losses, time decay eroding option value, and the complexity of options strategies leading to potential errors in execution.

In conclusion, each trading strategy for AAPL comes with its own set of risks that traders and investors need to consider carefully. Understanding the risks associated with each strategy is crucial for making informed decisions and aligning trading activities with the firm's risk tolerance and overall goals.

> Finished chain.

After analyzing the information obtained from the internet search results, here are the risks associated with the proposed trading strategies and execution plans for AAPL:

1. **Long-Term Investment:** This strategy involves holding AAPL stocks for an extended period to benefit from potential long-term growth. Risks associated with long-term investment include market volatility, economic downturns, and company-specific risks that could affect the stock price over time.
2. **Day Trading:** Day trading AAPL stocks involves buying and selling within the same trading day to capitalize on short-term price movements.
