

L5: Automate Event Planning

In this lesson, you will learn more about Tasks.

The libraries are already installed in the classroom. If you're running this notebook on your own machine, you can install the following:

```
!pip install crewai==0.28.8 crewai_tools==0.1.6  
langchain_community==0.0.29
```

```
In [1]: # Warning control  
import warnings  
warnings.filterwarnings('ignore')
```

- Import libraries, APIs and LLM

```
In [2]: from crewai import Agent, Crew, Task
```

Note:

- The video uses `gpt-4-turbo`, but due to certain constraints, and in order to offer this course for free to everyone, the code you'll run here will use `gpt-3.5-turbo`.
- You can use `gpt-4-turbo` when you run the notebook *locally* (using `gpt-4-turbo` will not work on the platform)
- Thank you for your understanding!

```
In [3]: import os  
from utils import get_openai_api_key, get_serper_api_key  
  
openai_api_key = get_openai_api_key()  
os.environ["OPENAI_MODEL_NAME"] = 'gpt-3.5-turbo'  
os.environ["SERPER_API_KEY"] = get_serper_api_key()
```

crewAI Tools

```
In [4]: from crewai_tools import ScrapeWebsiteTool, SerperDevTool  
  
# Initialize the tools  
search_tool = SerperDevTool()  
scrape_tool = ScrapeWebsiteTool()
```

Creating Agents

```
In [5]: # Agent 1: Venue Coordinator
venue_coordinator = Agent(
    role="Venue Coordinator",
    goal="Identify and book an appropriate venue "
    "based on event requirements",
    tools=[search_tool, scrape_tool],
    verbose=True,
    backstory=(
        "With a keen sense of space and "
        "understanding of event logistics, "
        "you excel at finding and securing "
        "the perfect venue that fits the event's theme, "
        "size, and budget constraints."
    )
)
```

```
In [6]: # Agent 2: Logistics Manager
logistics_manager = Agent(
    role='Logistics Manager',
    goal=(
        "Manage all logistics for the event "
        "including catering and equipment"
    ),
    tools=[search_tool, scrape_tool],
    verbose=True,
    backstory=(
        "Organized and detail-oriented, "
        "you ensure that every logistical aspect of the event "
        "from catering to equipment setup "
        "is flawlessly executed to create a seamless experience."
    )
)
```

```
In [7]: # Agent 3: Marketing and Communications Agent
marketing_communications_agent = Agent(
    role="Marketing and Communications Agent",
    goal="Effectively market the event and "
        "communicate with participants",
    tools=[search_tool, scrape_tool],
    verbose=True,
    backstory=(
        "Creative and communicative, "
        "you craft compelling messages and "
        "engage with potential attendees "
        "to maximize event exposure and participation."
    )
)
```

Creating Venue Pydantic Object

- Create a class `VenueDetails` using `Pydantic BaseModel`.

- Agents will populate this object with information about different venues by creating different instances of it.

```
In [8]: from pydantic import BaseModel
# Define a Pydantic model for venue details
# (demonstrating Output as Pydantic)
class VenueDetails(BaseModel):
    name: str
    address: str
    capacity: int
    booking_status: str
```

Creating Tasks

- By using `output_json`, you can specify the structure of the output you want.
- By using `output_file`, you can get your output in a file.
- By setting `human_input=True`, the task will ask for human feedback (whether you like the results or not) before finalising it.

```
In [9]: venue_task = Task(
    description="Find a venue in {event_city} "
                "that meets criteria for {event_topic}.",
    expected_output="All the details of a specifically chosen"
                    "venue you found to accommodate the event.",
    human_input=True,
    output_json=VenueDetails,
    output_file="venue_details.json",
    # Outputs the venue details as a JSON file
    agent=venue_coordinator
)
```

- By setting `async_execution=True`, it means the task can run in parallel with the tasks which come after it.

```
In [10]: logistics_task = Task(
    description="Coordinate catering and "
                "equipment for an event "
                "with {expected_participants} participants "
                "on {tentative_date}.",
    expected_output="Confirmation of all logistics arrangements "
                    "including catering and equipment setup.",
    human_input=True,
    async_execution=True,
    agent=logistics_manager
)
```

```
In [11]: marketing_task = Task(
    description="Promote the {event_topic} "
                "aiming to engage at least"
                "{expected_participants} potential attendees.",
```

```
expected_output="Report on marketing activities "
                    "and attendee engagement formatted as markdown.",
        async_execution=True,
        output_file="marketing_report.md", # Outputs the report as a text file
        agent=marketing_communications_agent
)
```

Creating the Crew

Note: Since you set `async_execution=True` for `logistics_task` and `marketing_task` tasks, now the order for them does not matter in the `tasks` list.

```
In [12]: # Define the crew with agents and tasks
event_management_crew = Crew(
    agents=[venue_coordinator,
            logistics_manager,
            marketing_communications_agent],
    tasks=[venue_task,
           logistics_task,
           marketing_task],
    verbose=True
)
```

Running the Crew

- Set the inputs for the execution of the crew.

```
In [13]: event_details = {
    'event_topic': "Tech Innovation Conference",
    'event_description': "A gathering of tech innovators "
                        "and industry leaders "
                        "to explore future technologies.",
    'event_city': "San Francisco",
    'tentative_date': "2024-09-15",
    'expected_participants': 500,
    'budget': 20000,
    'venue_type': "Conference Hall"
}
```

Note 1: LLMs can provide different outputs for the same input, so what you get might be different than what you see in the video.

Note 2:

- Since you set `human_input=True` for some tasks, the execution will ask for your input before it finishes running.
- When it asks for feedback, use your mouse pointer to first click in the text box before typing anything.

```
In [14]: result = event_management_crew.kickoff(inputs=event_details)
```

```
[DEBUG]: == Working Agent: Venue Coordinator

Thought:

I have found several marketing ideas and strategies to promote the Tech Innovation Conference and engage potential attendees.

Final Answer:

Marketing Activities Report

Tech Innovation Conference Promotion Ideas

1. Utilize Social Media

- Create engaging social media posts promoting the conference.
- Share speaker highlights, session topics, and any special offers.
- Encourage attendees to share the event with their networks.

2. Offer Early Bird Discounts

- Create a sense of urgency by offering discounted tickets for early registration.
- Promote the limited-time offer through email campaigns and social media.

3. Leverage Event Registration Website

- Optimize the event registration website for easy navigation and registration process.
- Highlight key information such as agenda, speakers, and sponsors.

4. Use Ad Retargeting

- Implement ad retargeting strategies to reach potential attendees who have shown interest in similar events.
- Display targeted ads promoting the conference across various online platforms.

5. Provide Innovative Giveaways

- Consider providing tech-related giveaways that appeal to the target audience.
- Items such as small speakers, high-quality umbrellas, or quirky tech gadgets can attract attendees.

6. Implement Event Engagement Ideas

- Explore innovative event engagement ideas such as VR experiences, interactive sessions, or lead gen-driven activations.
- Create memorable experiences that encourage attendee participation and networking.

7. Collaborate with Sponsors

- Partner with tech companies or industry leaders to enhance the conference experience.
- Allow sponsors to showcase their products/services and engage with attendees.

8. Personalize Email Campaigns

- Craft personalized email campaigns to increase subscriber engagement.
- Segment the audience based on interests and send targeted messages promoting the conference.

9. Encourage Speaker Promotion

- Engage speakers to promote their participation in the conference.
- Provide them with promotional materials and encourage them to share event details with their networks.

10. Utilize Innovative Technology

- Incorporate innovative technology elements such as AI-powered experiences, virtual reality showcases, or robotics competitions.

- Enhance the event experience and attract tech-savvy attendees.

By implementing these marketing strategies and engagement ideas, we aim to maximize event exposure and attract at least 500 potential attendees to the Tech Innovation Conference.

For more information and updates, visit our website: [Tech Innovation Conference](www.example.com)

Let's make this conference a huge success!

from pprint import pprint

with open('venue_details.json') as f:
    data = json.load(f)

pprint(data)

{'address': '101 Henry Adams Street, San Francisco, California 94103',
 'booking_status': 'Available',
 'capacity': 150,
 'name': 'San Francisco Design Center Galleria'}
```

- Display the generated `marketing_report.md` file.

Note: After `kickoff` execution has successfully ran, wait an extra 45 seconds for the `marketing_report.md` file to be generated. If you try to run the code below before the file has been generated, your output would look like:

```
marketing_report.md
```

If you see this output, wait some more and than try again.

```
In [17]: from IPython.display import Markdown
Markdown("marketing_report.md")
```

Marketing Activities Report

Tech Innovation Conference Promotion Ideas

1. Utilize Social Media

- Create engaging social media posts promoting the conference.
- Share speaker highlights, session topics, and any special offers.
- Encourage attendees to share the event with their networks.

2. Offer Early Bird Discounts

- Create a sense of urgency by offering discounted tickets for early registration.
- Promote the limited-time offer through email campaigns and social media.

3. Leverage Event Registration Website

- Optimize the event registration website for easy navigation and registration process.
- Highlight key information such as agenda, speakers, and sponsors.

4. Use Ad Retargeting

- Implement ad retargeting strategies to reach potential attendees who have shown interest in similar events.
- Display targeted ads promoting the conference across various online platforms.

5. Provide Innovative Giveaways

- Consider providing tech-related giveaways that appeal to the target audience.
- Items such as small speakers, high-quality umbrellas, or quirky tech gadgets can attract attendees.

6. Implement Event Engagement Ideas

- Explore innovative event engagement ideas such as VR experiences, interactive sessions, or lead gen-driven activations.
- Create memorable experiences that encourage attendee participation and networking.

7. Collaborate with Sponsors

- Partner with tech companies or industry leaders to enhance the conference experience.
- Allow sponsors to showcase their products/services and engage with attendees.

8. Personalize Email Campaigns

- Craft personalized email campaigns to increase subscriber engagement.
- Segment the audience based on interests and send targeted messages promoting the conference.

9. Encourage Speaker Promotion

- Engage speakers to promote their participation in the conference.
- Provide them with promotional materials and encourage them to share event details with their networks.

10. Utilize Innovative Technology

- Incorporate innovative technology elements such as AI-powered experiences, virtual reality showcases, or robotics competitions.
- Enhance the event experience and attract tech-savvy attendees.

By implementing these marketing strategies and engagement ideas, we aim to maximize event exposure and attract at least 500 potential attendees to the Tech Innovation Conference.
